

Security is paramount for any organization, especially in healthcare where we face constant threats. Hospitals and healthcare organizations want to increase security, avoid the likelihood of a breach, and limit the impact of an attack. Fines and penalties of a security breach can be costly, not to mention the damage caused to an organization's reputation.

However, surviving the COVID-19 crisis for hospitals and health systems will not depend solely on the quality of clinical care. Understanding the financial impact of public health emergencies, like the COVID-19 pandemic, is imperative. This article discusses the key facets of financial operations healthcare leaders need to think about now.

Craneware takes significant measures to ensure security across our organization, and our HITRUST certification reiterates our commitment to protecting our data and our customers' data. A single framework, the HITRUST CSF®, incorporates HIPAA, HITECH, NIST, CMS, ISO, and PCI standards, and going forward it will cover GDPR along with state-level data protection legislation⁵.
